

PROFILE

I'm a 26-year-old passionate freelancer from Belgium. Growing up in a household of creative filmmakers, I have been filming and editing videos since I was ten years old, and now going all in as a full-time professional.

Having worked in a fast-paced start-up for a few years, I am used to short deadlines and delivering results that work. I consider myself lucky enough to only apply to and accept jobs I want to do.

SKILLS

VIDEO EDITOR & WEB DEVELOPER

WORK EXPERIENCE

Freelance

2022 - Present

Starting as a freelancer allows me to take on jobs that I truly enjoy doing - going all in on any project. I also enjoy working together with multiple clients, learning their new requirements constantly and switching between projects fast.

Quality Assurance Engineer & Other

Spott // 2019 - 2021

My responsibility at Spott was to be the last checkpoint in the product development process. Working closely with the developers by testing and providing clear feedback on the product to ensure everything runs smoothly and the user's expectations are met. Working in a fast-paced startup, my job cannot be described with one title, I also worked on:

- Ideating, investigating, and planning the next features.
- Assisted marketing team by creating visuals and animated videos.
- Updating the user documentation, doing user session analysis looking for malfunctions and improvements.

Experience Center (Intern)

Price Waterhouse Coopers (Innovation team) // 2018

Being an intern in one of the biggest consultancy companies in the world certainly came with some valuable lessons.

- I learned the importance of clear communication and keeping everyone on the same page.
- I made videos for internal use, including filming and editing the final material.
- I organized a brainstorming session with the recruitment team.

Video Editor & Web Developer

Tropical // Family business

From a young age, I was involved in client projects: from editing pre-cuts, and filming with all kinds of cameras, to creating numerous TV advertisements, some of which aired on Belgium's national television. Other clients then required an easily manageable website or a social presence, which I learned to pick up too.

EDUCATION

Idea & Innovation Management

Erasmus Brussels University // 2016 - 2019

This valuable University course, taught by experts, is focused on creativity, innovation, entrepreneurship, and people skills. Other than the hundreds of tools poured into my brain regarding user testing, design thinking, innovation, etc. I learned to create business plans, get the best out of people, and guide calculated decisions.

Multimedia

Stedelijk Lyceum Cadix // 2014 - 2016

This course had a broad focus ranging from writing articles, creating illustrative designs, web development, filmmaking, and animation. While studying here, I got the chance to improve both my soft and hard skills. As I had direct contact with professionals in the field who provided me with feedback on my journalistic, directing, and organisational skills.
